

INVESTOR PITCH

Agent1c.ai

The AI-native OS for onchain life.

● AI-native

● Blockchain-native

● Web today

● Android tomorrow

VISION

The personal OS for the AI and onchain era

The next operating system is not just a launcher for apps. It is a persistent AI companion with native access to the user's workspace, identity, tools, and blockchain context.

01

Chatbot

AI answers questions, but lives outside the user's working environment.

02

Agentic Workspace

AI gains tools and context, but still runs inside app boundaries.

03

AI-Native OS

Agent1c.ai makes the agent the organizing layer across apps, wallets, files, and devices.

THE PROBLEM

AI and crypto are still trapped outside the OS

AI assistants live in chat windows. Wallets live in extensions and mobile apps. Work is scattered across tabs, files, apps, chains, and devices.

Users manually stitch together AI, identity, wallets, messages, data, and tools.

Chatbot

No workspace control

Wallet

No AI context

Browser Tabs

Manual switching

Files

Outside the agent

dApps

Chain silos

Devices

No continuity layer

Before

Copy/paste between AI, wallets, apps, messages, files, and tabs.

AI

Wallet

Files

dApps

Devices

Conceptual slide: product-led, no external stat required.

After Agent1c.ai

One operating environment where AI, wallets, files, apps, messages, and tools share context.

Solution

HOW WE DO IT

Browser-first OS, agent-first architecture

The browser gives immediate distribution. The architecture points toward deeper device control over time, including Android.

User	AI + wallet-native workflow	today
OS Shell	HedgeyOS desktop, apps, windows	live
Agent	Hitomi runtime + tools + context	live
Future	Mobile / Android-native control	roadmap

Proof point: the live website is the product interface, not a landing page.

Architecture

TECHNOLOGIES

Built as a native AI + blockchain stack

xAI now, then Bring Your Own Key support for major models and local model support.

● Solana now

● Ethereum next

● NEAR next

● Polygon next

Interface**HedgeyOS desktop****LIVE****Agent****Hitomi runtime, heartbeat, events****LIVE****AI****xAI now; BYOK + local models later****NEXT****Identity****Google, X, Solana; EVM/NEAR/Polygon planned****NEXT****Data****Files, notes, vault, future IPFS filesystem****FUTURE****Tools****Apps, browser, Telegram, relay concepts****LIVE**

WHY NOW

Three waves are converging now

AI is moving from chat to agents. Crypto is moving toward identity, payments, ownership, and infrastructure. Mobile computing is ready for a new OS-level interface.

WHY US / TEAM

AI, blockchain, product, and UX in one founding team

Pandu Sastrowardoyo

aka Decentricity · AI + blockchain founder

Co-founder of the Indonesian Blockchain Association, Blockchain Zoo, and Blocksphere.id; founder of DeBio Network, Reality Chain, and Myriad.Social.

AI / expert systems

Blockchain founder

Ecosystem builder

Jean-Daniel Gauthier

aka Danny · Product strategist + UX communicator

Product and user-experience layer for deep technical systems, with leadership across Degenics, Myriad.Social, Blockchain Zoo, and blockchain education.

Product strategy

UX communication

Web3 product

MARKET QUADRANT

The missing quadrant: AI-native + blockchain- native OS

Chat apps, wallets, browser agents, and launchers each solve one slice. Agent1c.ai combines AI-native interaction, blockchain-aware identity, and an OS-like workspace.

AI

AI enthusiasts

Want more than a chat window.

W3

Web3 natives

Live across wallets, chains, dApps, and communities.

IT

IT sovereignists

Care about control, privacy, local models, and independence.

DEV

Builders

Experiment with agents, apps, and onchain workflows.

De

Crypto / DePIN operators

Need wallet-aware workflows and chain context.

OS

Android power users

Want deeper control over the device layer.

MOAT

The moat is the operating context

A chat app can answer questions. A wallet can sign transactions. Agent1c.ai can become the persistent environment that coordinates both.

AI-native OS

Wallet context

Cross-device web

Local workspace

Android path

REVENUE STREAMS

Revenue from the AI OS layer

\$99

per major version. Minor updates are free. Major versions expected every 12-18 months.

Current	Major-version software license model
Near-term	Premium upgrades, blockchain feature packs, BYOK/local model capabilities
Expansion	App/tool marketplace revenue share and developer ecosystem services
Long-term	Android distribution, launcher, or ROM-related models

ROADMAP

From web app to AI-native Android

Milestone-based path from live web product to multi-chain, app-building, IPFS, local models, and Android-native control.

THE ASK

Help turn Agent1c.ai into the AI-native operating layer for the onchain era

Funding amount, use of funds, runway, and strategic partner asks to be finalized.
